Mac Installation steps for DIY Voice Acoustic Analysis

1. Visit http://github.com/YehyaS/Dosimetry-App

2. Sroll down to "Getting Started" section and select "MacOS"

3. The download will begin

4. Create a new folder on your Desktop

5. Navigate to your Downloads folder, drag-and-drop "dosimetry_app_mac.zip" into the new folder you created on the Desktop

6. Close out of Downloads folder

7. Open up the new folder on the Desktop that you created

8. Right click on the "dosimetry_app_mac.zip" → open with → Archive Utility

9. Right click ON THE FOLDER YOU CREATED ON THE DESKTOP
   a. (*Note*: You must right click on the folder from your desktop)

10. Scroll down to "New Terminal at Folder" and click on it

11. In the window that appears you will need to first copy/paste "sudo chmod -R 755 dosimetry_app.app" and then click enter on your keyboard
    a. (Note: this line of code is included on the GitHub page)

12. You will be prompted to enter your password, type it in and click enter on your keyboard
    a. (*Note*: the characters you type will not appear in the terminal for security, but each keystroke will be recorded)

13. Next, copy/paste "xattr -c dosimetry_app.app" and then click enter on your keyboard
    a. (*Note*: this line of code is included on the GitHub page)

14. Now return to the folder on the Desktop that you created and double click on "dosimetry_app"

15. The application will open after some processing time
